

**NOTICE  
CLARIFICATION OF CANADA MILEAGE**

GSA has received some inquiries regarding the mileage basis between the continental United States (CONUS) and Canadian provinces. The following statements clarify mileage determination for surface shipments originating in North America.

As referenced in GSA's 2001-2002 Request for Offers (RFO), GSA has adopted ALK Technologies, Inc. 5-digit ZIP code mileage for determining highway mileage for all household goods surface shipments between any two locations within CONUS.

For the computation of charges for shipments between CONUS and Canadian provinces, the current Government 415 tariff uses Rand-McNally highway mileage. To stay in line with this publication, GSA has determined all surface household goods shipments between any point in CONUS, including the District of Columbia, and a Canadian province will be based on Rand-McNally mileage.
